

Memorandum: IT Infrastructure Division

Date: April 15, 2026

Subject: Routine Maintenance on Air-Gapped Appliance

Summary of Action:

On April 14, Lead Cloud Systems Engineer Marcus Vance (Badge #8849-V) performed routine diagnostics on the isolated GDC cluster located at the primary data center in Sub-level 3, Secure Room 314-B.

The physical appliance IP (10.45.99.12) was pinged from the diagnostic terminal. To access the diagnostic logs, the admin override password DeltaV-99!\$# was temporarily utilized. System patching was completed successfully without breaking the air-gap protocol.
